1	Introduction	1
1.1	Multi-channel multirate signal measurement	1
1.2	Multirate statistical signal processing	17
1.3	Notation	23
2	Background	25
2.1	Second-order theory of stationary stochastic processes	25
2.1.1	Definitions	25
2.1.2	Properties of the autocorrelation sequence	26
2.1.3	Defining the power spectrum	26
2.1.4	Classification of random processes based on their power spectral density	28
2.2	Statistical inference and information	30
2.2.1	The Kullback-Leibler Divergence	32
2.2.2	Kullback-Leibler divergence as a measure of distance between two probability measures	34
2.2.3	Kullback-Leibler divergence for stochastic processes	35
2.2.4	Entropy, mutual information and joint information	36
2.2.5	Information rate of WSS stochastic processes	37
2.3	Theory of majorization	38
2.3.1	Definition and basic properties	38
2.3.2	Geometry of majorization	39
2.3.3	Algebraic properties of majorization	40
2.4	Inverse problems, ill-posedness and Tikhonov's theory of regularization	41
2.4.1	Ill-posed linear operator equations	42
2.4.2	Tikhonov's theory of regularization	44
2.4.3	Other variations and results	45

3	Multirate Spectrum Estimation	47
3.1	Introduction	47
3.2	Formulating the inference problem	47
3.3	The Maximum Entropy principle	49
3.4	Solving Problem 2	50
3.5	On well-posedness of the Maximum Entropy solution	52
3.6	Practical considerations	55
	3.6.1 Non-admissible data	55
	3.6.2 Avoiding numerical integration in the MEIE Algorithm	57
3.7	Examples	60
3.8	Discussion on the Maximum Entropy formalism	68
	3.8.1 Methodological foundations	68
	3.8.2 Geometric interpretation	71
3.9	Concluding remarks	74
4	Multirate Time Delay Estimation	75
4.1	Introduction	75
4.2	Time-Delay Estimation in Multirate Sensor Arrays	78
	4.2.1 Introduction	78
	4.2.2 PHAT for low-rate signals	80
	4.2.3 Choosing the sensor filters	81
	4.2.4 Multirate TDOA estimation experiments	86
4.3	Fusion of Low-rate Signals In The Presence Of Time Delay	90
4.4	Designing The Synthesis Filters	91
	4.4.1 Synthesis filter bank design using \mathcal{H}_∞ optimization	92
	4.4.2 Example designs for the integer TDOA case	95
4.5	Procedure for designing multirate sensor arrays	97
4.6	Concluding Remarks	97
4.7	Proof of Theorem 1	98
4.8	Proof of Theorem 2	99
4.9	Perfect reconstruction linear-phase filter banks	100
5	Multirate Signal Estimation	103
5.1	Introduction	103
5.2	Problem Statement	103
5.3	Statistics of the non-observable vector X and the measurement vector V	105
	5.3.1 Statistics of X	105
	5.3.2 Statistics of V	105
	5.3.3 Joint statistics of X and V	106
5.4	Estimating X given V	106
5.5	Discussion	115
5.6	Putting everything together	115
5.7	Concluding remarks	122

6	Algebraic Theory of Scalable Multirate Systems	123
6.1	Introduction	123
6.2	FIR analysis and synthesis systems	126
6.2.1	Basic notions	126
6.2.2	The class \mathcal{L}	127
6.3	Scalability in multirate systems	129
6.3.1	Ordering filter banks in class \mathcal{L} based on their scalability	130
6.3.2	Scalability and power distribution	131
6.4	Embedding partial ordering of scalability in a total ordering ..	136
6.4.1	Schur-convex functions	136
6.4.2	Characterization of Schur-convex functions	137
6.4.3	Properties of SC_ϕ -optimal solutions	139
6.4.4	An illustrative design example	141
6.5	SC-Optimality and Subband Coding	145
6.6	SC-Optimality and the Principal Component Filter Bank	147
6.6.1	Definition of the PCFB	147
6.6.2	PCFB is an upper bound for \mathcal{L}	149
6.6.3	Approximating PCFB using the filter banks in \mathcal{L}	149
6.7	Concluding remarks	151
6.7.1	Algorithmic aspects of finding an SC_ϕ -optimal element in \mathcal{L} and previous works	151
6.7.2	Similarity with rate-distortion theory	152
6.7.3	Extension to non-perfect-reconstruction filter banks	153
6.7.4	Extension to tree-structured filter banks	153
6.7.5	Scalability with respect to other error measures	154
6.7.6	Scalability when an optimal synthesis system is used ..	154
6.7.7	On partial ordering and subjectivity	154
6.8	Summary	155
7	Information Theory of Multirate Systems	157
7.1	Introduction	157
7.2	The information content of a low-rate measurement	157
7.3	Measuring statistical information in practice	164
7.4	Scalability in terms of information	169
7.5	Concluding remarks and open problems	170
8	Distributed Algorithms	173
8.1	Introduction	173
8.2	Spectrum estimation using sensor networks	175
8.2.1	Background	175
8.2.2	Mathematical formulation of the problem	177
8.3	Inverse and Ill-posed problems	179
8.3.1	Ill-posed linear operator equations	180
8.3.2	Regularization methods for solving ill-posed linear operator equations	181

XII Contents

8.4	Spectrum estimation using generalized projections	183
8.5	Distributed algorithms for calculating generalized projection ..	186
8.5.1	The Ring Algorithm	186
8.5.2	The Star Algorithm	191
8.6	Concluding remark	194
8.7	Acknowledgements	194
9	Epilogue	195
